

Photoshop Black & White to Color Photo

- Select one of the black and white images
- Open the black and white image in Photoshop

- DO NOT** unlock the Background layer
- Keep it locked and labeled *Background*

- Use the selection tools to select an area of the image to color

****Use either Magic Wand, Magnetic Lasso, or Quick Selection to get the “dancing ants”***

****Remember when using the Magnetic Lasso that you must click back on the starting point for it to form a selection (dancing ants)***

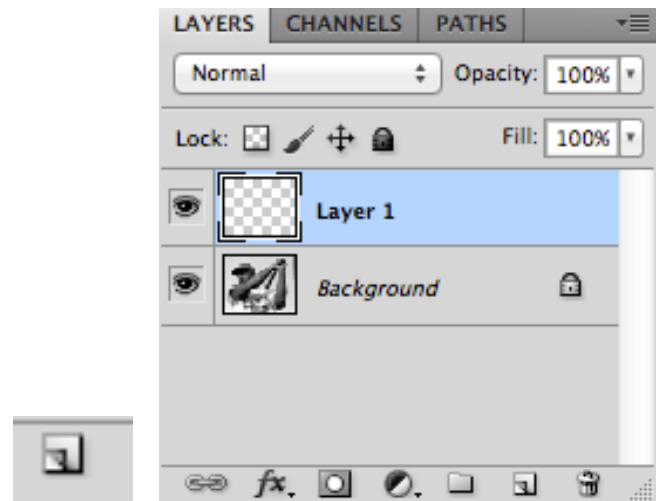

- Once you have a selection (dancing ants)

- Go into Quick Mask to make sure the selection is clean and neat.. Paint black or white with a hard brush to clean up any messy areas

- Create a new Layer for each different color area

Photoshop Black & White to Color Photo

-Pick a realistic color from the Swatches Window

-With the new layer highlighted in the Layers Window, hold Alt + Delete to fill the selection in with a color

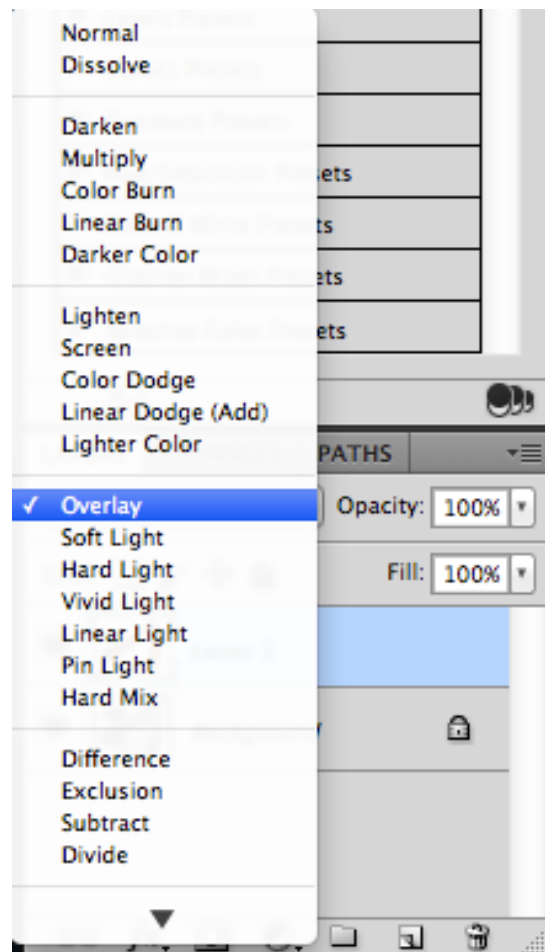

****Remember do not paint any color on the original black and white image***

-The selection will fill with the color

-Select a Color Mode on the Layers Window that makes the filled color look realistic. Can choose from Multiply, Overlay, Color or any of the options that make the image look good

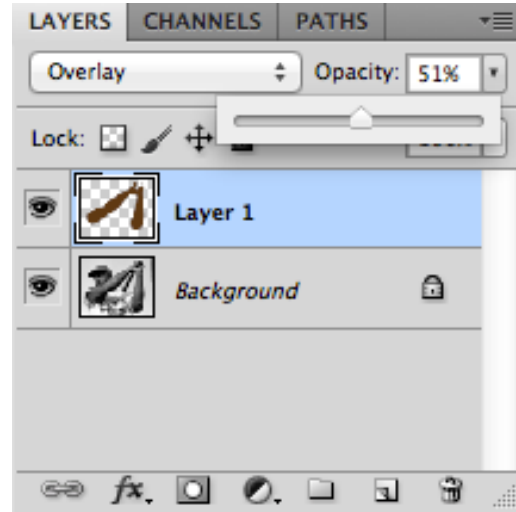

Photoshop Black & White to Color Photo

-Deselect (Command + D) to make the "dancing ants" selection go away.

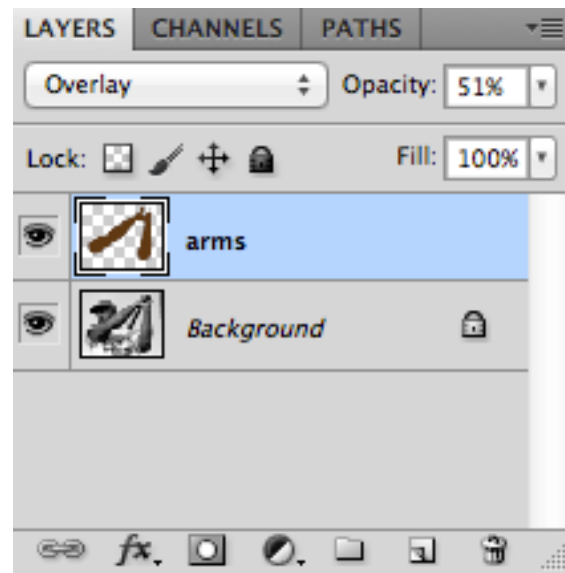

-Adjust Opacity on the Layers Window if need to blend the color any further

-Adjusting the Opacity a little will give a more natural look to the image

-Label the layer in the Layers Window

-Click on the Background layer in the Layers Window and use a selection tool to select the next area on the image to color

-Repeat the process to completely change the black and white image to a full color image.

****Remember each different area of color must have a different layer***
